Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Local

```

pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  VQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        modulates N-TAD function and antagonists, agonists, modulators and HIF-1 peptide fragments useful for modulating HIF-1 function or the function of proteins that interact with it. The isolated polypeptides and their fragments with altered residues are useful in methods for treating diseases. The disease is an ischaemic condition, e.g. brain infarction, heart infarction or circulatory disorder. The disease may also be cancer, heart infarction, demyelinating disorders, diffuse proliferative plomerulonephritis, toxoplasmosis caused retinochorioiditis HIV (human immunodeficiency virus) caused Tat anglogenesis, HIV-caused Kaposi's sarcoma, hepatitis-caused inflammation, hepatitis-caused anglogenesis, sarcoma, hepatitis-caused inflammation, hepatitis-caused anglogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a polypeptide comprising hypoxia-inducible factor-1 (HIF-1) with alterations of the transactivation domain (N-TAD of C-TAD). Also included are nucleic acids encoding the altered proteins, a vector comprising the nucleic acid, a host cell transformed with the vector, methods for producing the protein or its functional fragment or an isolated degradation box, a method of screening for an agent that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptides comprising hypoxia-inducible factor-1 with alterations of the transactivation domain, useful treating ischaemic conditions, e.g. brain infarction, heart infarction or circulatory disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chronic ulceration, proliferative retinopathy, retina haemangioblastomas, neovascularisation, arterial hypervascularisation, sarcoidosis, bullous skin disease, vasculitis with angiogenesis, dermatomyositis with angiogenesis, dermatomyositis with surfunction arthritis, juvenile osteoarthritis, polyarthritis, aneurysm or atheroma. The present sequence encodes HIF-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 73-76; 80pp; English.

The method provides conjugation of gene expression useful conjugation of gene expression useful conjugation of gene green in pathogens (e.g. Plasmodium or conjugation of gene present in pathogens (e.g. Plasmodium or cytokine, id, developmental or prion genes. The method provides more conjugation in the conjugation of gene expression than use of known conjugation of gene expression t

The method is useful for identifying mutations and polymorphisms that affect the biological response to a particular cellular process. The method also allows the molecular dissection of biological pathways by altering a particular pathway under study. By introducing a heterologous nucleic acid into a cell population, the level of a particular molecule can be influenced, allowing a pathway to be dissected into its precise molecular components. The main use of the method is to compare gene expression in cells from a diseased patient of the method is to compare gene expression in cells from a diseased patient and from a normal patient. This sequence represents a human hypoxia inducible factor 1 alpha (HIF-1 alpha) which is inserted into an Adapt ires-GFP plasmid for use in identification of hypoxia-regulated genes in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to differential expression screening to identify genetic element involved in a cellular process. The method involves comparing gene expressions in two cells, where one cell has altered levels of a biological molecule, and identifying the genetic element
            Regulation of trophoblast invasion - by, e. (factor-beta3 inhibitor, useful for detecting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence encodes human hypoxia inducible factor 1 alpha (HIF-1 alpha). The specification describes a composition for regulating trophoblast invasion which comprises an inhibitor of transforming growth factor-beta 3 (TGF-beta3), TGF-beta family cytokine receptors, HIF-1 alpha or oxygen tension. The composition is used in methods of diagnosing, monitoring, preventing or treating conditions requiring regulation of trophoblast invasion, especially preeclempsia in pregnant
                                                                                                                  Treating a subject (at risk of) having a hematologic malignancy or multidrug resistance, e.g. lymphoma or myeloma, by administering hypoxia inducible factor 1 binding molecules or small
 The invention relates to a method of treating a subject having or at risk of developing a haematologic malignancy or multidrug resistance (MDR). The method involves administering hypoxia inducible factor-1 (HIF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1
                                                                          Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human HIF-lalpha cDNA.

The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening that alters the expression of at least one gene in Gs; (2) screening that alters the expression of at least one gene in Gs; (2) screening (M2) GA by contacting GC with an agent capable of modulating GCA or an inflammatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           binding molecules or HIF-1-SUMO-1 complex modulators. mdr1-hypoxia responsive element (HRE) binding molecules or antisense nucleic acid molecules and SUMO-1 binding molecules or antisense molecules are useful for treating a subject having or at risk of developing haematologic malignancy or MDR (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoroliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is human HIF-lalpha cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                 Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     human hypoxia inducible factor-1 (HIF-1), a DNA binding protein that binds to the enhancer region of e.g. erythropoietin and vascular endothelial growth factor (VEGF) genes. The DNA sequence is a composite of 3 clones obtd. by screening an Hep3B library and by database analysis. HIF-1 alpha nucleic acids can be used to prepare recombinant HIF-1 alpha in transformed host cells, as probes, and in the gene thorapy of HIF-1-mediated or hypoxia-related disorders such as atherosclerotic coronary or cerebral artery disease; antisense sequences inhibit HIF-1 expression e.g. to treat

The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914 represent PCR primers for a mouse ischaemic condition related sequence,
                           determining cancer in a patient. (I), (II) or antigen-presenting cells expressing (II) is useful for stimulating and/or expanding T cells specific for a tumour protein. The method comprises contacting T cells with one of the components under conditions to permit the stimulation
                                                                                                                                                                                                                                  The invention relates to novel isolated lung small cell cancer antigen polynucleotides (I) and polypeptides (II) used in a method of detecting cancer in a patient. The method is optionally performed by utilising oligonucleotides (III), where the biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Lung tumour polynucleotide and polypeptides useful in therapy diagnosis of cancer especially lung cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          05-SEP-2000;

      to amplify additional flanking sequences from a commercial HepG2 library. MOP1 is also known as hypoxia inducible factor 1 alpha. The factor is induced by low oxygen. It interacts with HSP90 and with ARNT. The ARNT-dimerised factor regulates expression of erythropoietin, among other genes. The invention also provides novel MOPS 2-9 nucleic acids (see AAX5981-88) and proteins (see AAY06289-97). These are useful in a variety of research, diagnostic and therapeutic applications. Several of the MOPS are alpha-class hypoxia-inducible factors. Others are involved in
                                                                                                                                                                          search of human ESTs designed to identify basic-helix-loop-helix-PAS (bHLH-PAS) proteins that interact with either the Ah receptor (AHR) or the Ah receptor nuclear translocator (ARNT). To obtain extended
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    stimulating an immune response in a patient and for inhibiting the development of a cancer especially lung cancer in a patient. An isolated T cell population is useful for removing tumour cells from biological sample and for inhibiting the development of cancer in a patient. AAS61460-AAS61874 represent novel human lung small cell
                                                                                                                                                         or the Ah receptor nuclear translocator (ARNT). To obtain extended open reading frames for each EST, an anchored-PCR strategy was used
                                                                                                                                                                                                                        This is the nucleotide sequence of a cDNA encoding MOP1 (see AAYO6289), a member of the PAS superfamily, where PAS stands for PER/ARNT/SIM domains. The cDNA was identified in an iterative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cancer antigen coding sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SS X
                                                                                              The invention relates to isolated polynucleotide (I) and CD polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase and in recombinant production of (II). The complex comp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3933 BP; 1243 A; 784 C; 750 G; 1156 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                            whose expression differs, by comparing expression under different environmental conditions. The method is useful for identifying mutations and polymorphisms that affect the biological response to a particular cellular process. The method also allows the molecular dissection of biological pathways by altering a particular pathway under study. By introducing a heterologous nucleic acid into a cell population, the level of a particular molecule can be influenced, allowing a pathway to be dissected into its precise molecular components. The main use of the method is to compare gene expression in cells from a diseased patient and from a normal patient. This sequence represents psMART CMV-HIF from a vector expressing hypoxia inducible factor 1 alpha (HIF-1 alpha) which is used in methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                   Screening a genetic element involved in a cellular process, comprises comparing gene expressions in a cell, and a second cell that has altered levels of genes used in the process, and detecting an element
